

# Sam Example

# Accuracy

How accurate are you? Are you able to work quickly and precisely? For various positions it is important that you work meticulously, even at a high work pace.

You have taken a test to determine how accurate you are. This test consisted of codes that you had to compare. You will find your test result in this report.

In order to say whether your score is high or low, your score has been compared with a norm group. A norm group is a large group of people who completed the same questionnaire under similar circumstances.

Interpretation of the scores:

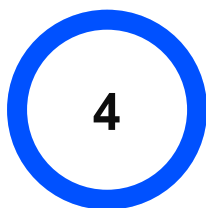

1. Low
2. Below average
3. Average
4. High

A high score means that you worked quickly and precisely, so you answered many questions correctly. A low score can be caused by making a lot of mistakes or by working slowly.

The norm group used to compare your scores is: **General norm**.

---

## Your score

HIGH

### Accuracy

The test shows that you can work very quickly and accurately. You have answered more questions correctly and/or worked faster than most others.
